SUSTAINABILITY & ETHICS

**Draper Tools has been a family-run business for four generations.
So we understand that handing on a sustainable inheritance is vitally important.
That's why we take our environmental and corporate social responsibilities very seriously.**

We build our approach to this vital topic on four pillars:

Today, we build from the ground up with a carbon-neutral future in mind.

We shred boxes to be repurposed as packaging material.

1.

We build for the future

Simply by being here and going about our business, we naturally affect the environment. However, we strive to minimise our impact – and make a positive difference wherever we can. We constantly review ways we can improve efficiency and minimise waste. We're transitioning to energy-efficient LED lighting across our warehouse estate. And we're building our new site at North Baddesley with the aim of coping with a changing climate as we work towards a carbon-neutral, net zero future.

2.

We're cutting waste

Overall, 82% of our waste is currently recycled, with the remainder going to energy recovery facilities. Naturally, we're paying particular attention to how we use packaging and are cutting down on single-use plastic and reducing total packaging. We're also minimising "empty space" to use less fuel in transportation and are expanding our in-house Sustainable Packaging Team. We happily go beyond our legal obligations in these areas. Why? Because we believe that's the right approach for the environment as well as being good for business – and that's a great model for true sustainability.

We encourage every generation to value the environment around them.

Our Shanghai team ensures suppliers meet our social, moral, ethical and safety standards.

We love to lend a hand with local community initiatives.

3.

We care about supply chain ethics

Wherever we operate, we will not knowingly do business with suppliers that breach acceptable moral and ethical standards. That's why we aim to audit every factory we work with to ensure they meet our social, moral, ethical and safety requirements. This task is so important that we do not feel it can be delegated to a third party. One of the measures we take is to employ a QA team in Shanghai led by our own General Manager, who has been with the company for three decades.

4.

We put people first

Our people are crucial for delivering sustainability. Quite simply, we can't make it happen without them! So we look after each other with a real and enduring concern for our collective wellbeing – including our mental health. As a family-run business, it's absolutely key to our culture. What's more, this care extends to people beyond our organisation. We think globally and act locally, taking an active role in local community programmes and charity initiatives. We are also keenly aware of our responsibility to be good corporate citizens in the wider world too.

MANAGEMENT SYSTEM CERTIFICATION
DNV
ISO 9001 · ISO 14001

We are determined to be transparent on sustainability. With that in mind, we've begun publishing an annual report explaining where we stand and what we're doing to improve our performance.

DID YOU KNOW?

These versatile tools are extremely useful for working in confined spaces, such as under the bonnet where space is tight – especially in today's high-tech vehicle engines. The ratchet action requires just 5° movement to turn each fastener. Some sets are available with a reverse mechanism.

If space is even more at a premium, then the flexible head version is more than ideal. The head pivots through 180° to gain access to even tighter locations.

KIT COMBINATIONS

Our modular design allows a combination of kits to fill a draw. Simply remove the cutaway strips on the 1/4" drawer foam inserts as required to create these combinations.

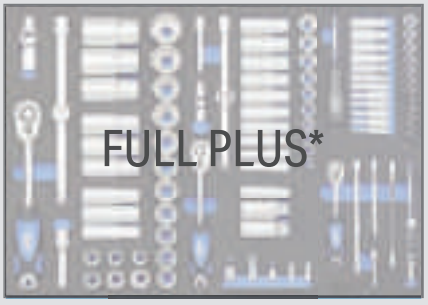

* Roller cabinets only

Our 1/4 drawer trays can also be used in the 1/3 size drawers in our tool chests.

1/4 size EVA foam trays are designed to fit in the 1/3 width drawers in our Draper tool chest range without removing the cutaway strips.

Use scissors to remove the pre-machined cutaway strips on each side of the EVA foam tray.

The tray now fits neatly into the 1/3 width drawer in our Draper Expert tool chests.

With the cutaway strips removed, four 1/4 drawer EVA foam trays will fit the full drawer.

PROFESSIONAL SOCKETRY & SPANNERS MADE IN GERMANY

All Elora products are hot dropped forged, incorporating strict production control that results in top quality tools. This means that wrenches, ratchets, socket parts and many other products are forged under Elora's control to its own exacting high standards. The major proportion of the Elora range is made from one-piece forgings. Hardening takes place in a continuous automatic hardening furnace, followed by tempering in oil. This strictly controlled process gives clean and precisely hardened products.

NATIONAL AND INTERNATIONAL STANDARDS

The following terms will be seen in the Catalogue showing the relevant standard the particular tool has been manufactured to:

DIN – "Deutsche Industrie Norm"
The German equivalent of a British Standards Institute specification. Many Elora products, particularly sockets and socket accessories, are manufactured to exceed the coveted DIN standard by up to 50%. Other products to the DIN Standard include wrenches, water pumps and circlip pliers.

VDE – "Verein Deutscher Elektrotechniker"
The internationally recognised German manufacturing and safety testing organisation.

ISO – "Die Internationale Organisation für Normung"
The International Organisation for Standardisation is a worldwide federation of national standard bodies that prepares international standards through ISO technical committees. Many Elora products,particularly sockets and accessories, have been approved by this organisation.

FLEXIBLE HANDLES

Any claims for replacement of flexible handles must be returned WITH THE TOOL to Draper Tools for inspection prior to replacement. Test figures show 98% are broken by abuse and, on testing, 99.9% of the returned flexible handles exceed the BS test by three times. ALSO, these products must not be used with an extension bar of any length. If used in this way, it can cause undue stress on the joint between the extension bar and flexible handle.

STAINLESS STEEL - SYNONYMOUS WITH QUALITY & DURABILITY

DID YOU KNOW?

Stainless steel resists corrosion due to its composition, making it highly suited to fixings used within the food and drink industry, sanitary industries and hygiene-critical sites such as hospitals. The finish remains bright in hostile environments, preserving both the visually appealing characteristics and the hygienic properties – provided it is treated correctly.

While stainless steel fixings (bolts and screws) exhibit "self healing" properties, the use of ferrous-based tools with them should be discouraged as, inevitably, there will be some migration of tool particles to the fixing. This will cause rust on its surface, destroying the appearance as well as the cleanliness. Since ferrous tools are frequently chrome plated, there is also the likelihood of chrome plate debris entering foodstuffs through inappropriate use in food preparation.

Using tools made of stainless steel avoids some of these issues.

Long Metric Stainless Steel Combination Spanners

Manufactured to DIN 3113 Form B/ISO 3318 Standard

Professional Quality, forged from stainless steel hardened, tempered. Bi-hexagon ring and jaw offset at 15°. These spanners are aimed at applications where cleanliness is paramount, specifically on stainless steel fittings where a ferrous based spanner would transfer material to the fixing, promoting the formation of rust. With no need to plate the spanner there is no danger of chrome plate flakes contaminating the work area. Sold loose.

Q: Why use regulators for compressed air?
A: Different air tools require different air pressures. For example, Health & Safety legislation stipulates that air blow guns MUST work at, or below, 30psi. A large air nailer, however, needs a minimum of 60psi and will need up to 100psi when driving larger nails to prevent damage to the nail driver blade. Make sure you adjust the pressure to suit the tool every time.

Q: Why use lubricators for compressed air?
A: Except for spraying equipment, almost all other air tools require lubrication. Air tools are precision manufactured to close tolerances to get the best power and lightest weight. You would not run your car without oil - don't do it to your air tools! Lubricators can greatly extend the life of your air tools.

Q: Why use filters for compressed air?
A: When air is compressed, the water vapour in that air is also compressed. This water vapour then reforms as water and can contaminate compressor tanks and air lines and very quickly rust the inside of your air tools.

Q: Where should the filter/regulator/lubricator be in the air line?
A: In simple terms, as close to the air tool as possible when the tool is in use. This ensures any "downstream" contaminates are removed, that the lubricating oil is correctly dispersed, and that you are operating at the correct pressure.

1 HSS Bi-metal Holesaw Blades

High-speed variable pitch bi-metal hole saws ideal for cutting perfectly round and accurate holes in metals, plastics and wood up to a depth of 35mm (1.3/8"). They offer a hardened M3 steel cutting edge that is welded to a tough alloy steel body, making them very durable and hardwearing. The construction reduces the risk of shattering. The holesaws have four side slots for removal of slug, as well as a female threaded spindle for fixing to a 9.5mm arbor. It can be easily attached to power drills for a fast, clean, heavy-duty cutting action in stubborn materials. When metal cutting it is advisable to use a lubricant to prolong the service life of the hole saw, such as Stock No. 76109 - Metal Cutting Lubricant (400ml).

To complete the holesaw assembly a holesaw arbor is required.

7 Draper Expert TCT Circular Saw Blades for Wood with PTFE Coating

This laser cut Titanium Carbide-Tipped (TCT) circular saw blade has a PTFE coating, which improves the ease of the cut, reduces heat in the blade and prevents rusting and resin build-up. The micrograin titanium carbide teeth provide thin cuts and little waste. The heat expansion slots are laser cut and this provides the blade with enough room to expand when it heats up. Anti-friction vents tap vibrations ensuring the blade runs more true without any unbalance. These vents also limit the amount of noise from the blade, which is great for use in a quieter working environment. The anti-kickback design prevents the blade feeding too quickly. Designed for use on hardwood, softwood, MDF, chipboard and plywood.

HOW WE MEASURE OUR TOOL BOXES

TOOL BOX DIMENSIONS - The measurements shown in this catalogue are approximate and shown as the following: Length (L), Width (W), and Height (H), and are shown in the information below each catalogue entry.

STEEL TOOL BOXES AND CABINETS - The drawers and storage space are measured showing "internal" dimensions. This provides accurate assessment of the area inside for products - as the steel used to make the metal boxes can be up to 3 or 4mm thick.

PLASTIC TOOL BOXES, STEEL STORAGE CABINETS AND TOOL CASES - These are measured showing the "external" dimension. Generally these are made from thinner materials and the internal measurement is not as critical.

NB: All dimensions can vary during production.

SHEARS & SNIPS

You don't have to be a tinsmith to cut sheet metal successfully. With the right tool and a few simple techniques, you can make almost any cut with ease. A simple rule of thumb when cutting straight cuts is to use tinman's shears. And it's easier to cut curved shapes with aviation shears as they're designed more for leverage and manoeuvrability.

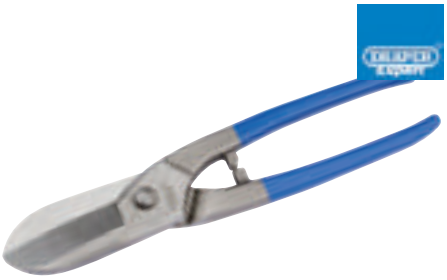

DID YOU KNOW?

"NO NIP" FEATURE ON TINMAN'S SHEARS (Item Nos. 1 and 2) AND JEWELLER'S SNIPS (Item No. 5)

These products have a "no nip" feature that prevents pinching of the palm when the handles come together when cutting tough materials.

THE ULTIMATE SCREWDRIVER SELECTION

Our screwdriver range characteristics are featured here, designed for a variety of different trades and manufactured from four distinctive steel grades including SVCM+, just choose a screwdriver type that best suits your requirement.

CR.V: Chrome Vanadium steel formed by alloying Chrome Vanadium with steel. This provides the steel with properties ideally suited for high-stress applications.

S2: According to the AISI classification system, shock-resisting steels are designated as group 'S' steels. All 'S' steels have a higher strength composition than standard steel.

SVCM: Made by blending carbon, silicon, magnesium, nickel, chromium, molybdenum and lead to create a metal featuring a host of qualities including high strength and ductility.

SVCM+: Steel encompassing all the features demonstrated in SVCM steel, enhanced by quenching and tempering, enabling the SVCM+ steel to reach HRC59 hardness.

DID YOU KNOW?

EN60900 is the European Standard for hand tools for live working up to 1000V AC or 1500V DC. Any hand tool for live working must be manufactured and approved to this standard. Unless the tool you purchase has the conformance marks stamped on and is fully certified, it is probably not up to the relevant standards. All Draper electrical screwdrivers have been rigorously tested to EN60900 so you can be sure and safe in the knowledge that these screwdrivers will perform as required.

LIVE LINE WORKING

When working on electrical installations, it is safest to disconnect these systems from the energy supply first. Only a skilled and qualified electrician may work on live installations and then only in conformance with the relevant industrial safety standards.

DID YOU KNOW?

QUALITY STAPLERS AND TACKERS

Our range of stapling, tacking and nailing tools cater for all levels of use. Whether tacking cables, reupholstering furniture or felting a roof, we provide a stapler for the job.

The length of the staple used in the stapler/tacker is an indication of the power of the device. The illustrations on the right identify the key attributes of the staples: height, thickness and width of the staple. All of these products can be used as a tacker to drive straight-legged staples into wood or similar materials and those with an anvil can be used as an office stapler as they bend the legs of the staples over, binding the paper together.

Height of the staple | Thickness of the staple | Width of the staple

DID YOU KNOW?

Unlike builders' cold chisels, which are designed to be used on brick and stone, engineers' chisels and punches are made for use on metal. All the heads on our cold chisels and punches are chamfered to slow down the formation of the mushroom shape caused by hammering, although "mushrooming" is a necessary feature.

PRODUCT LOCATOR

Handles for engineers files are shown on page 644.

DID YOU KNOW?

FILES - This range of high quality files are suitable for engineers.

The files are manufactured from quality carbon chrome steel that's correctly hardened and tempered, conforming to the British standard.

Always use the correct file for the job in hand - bastard cut for fast metal removal, second cut for general filing and smooth cut for a fine finish.

Needle files are used for detailed work - depending on the type of file, they can be used for metal or wood to remove burrs, irregularities, enlarging holes or slots and for sharpening saws.

IMPORTANT NOTE:

FILES - TRANSIT DAMAGE

As a result of potential damage to file teeth during transit, we regret that file quantities in boxes (usually 12) are fixed and cannot be broken down.

QUALITY ASSURANCE MAKES THE DIFFERENCE

EN60900 is the European Standard for hand tools for live working up to 1000V AC or 1500V DC. Any hand tool for live working must be manufactured and approved to this standard. Unless the tool you purchase has the conformance marks stamped on them, it is not up to the relevant standards. All Knipex electrical pliers have been rigorously tested to EN60900 so you can be safe in the knowledge these tools will perform as required.

LIVE LINE WORKING

When working on electrical installations, it is safest to disconnect these systems from the energy supply first. Only a skilled and qualified electrician may work on live installations and then only in conformance with the relevant industrial safety standards.

VDE 8 RANGE

This range of pliers and cutters has been manufactured by Knipex for Draper Tools. We have ensured that the specification is second to none - each plier is manufactured to the highest standards of quality and safety.

KNIPEX PLIERS AND CUTTERS – GENERAL RANGE

This group of pliers and cutters covers the non-electrical range including combination pliers, diagonal side cutters, bolt cutters, bolt croppers, cable shears and many specialist types of pliers (see below).

Generally they have basic plastic coated handles or comfort grip handles which are designed to reduce fatigue and movement in the hand whilst working.

KNIPEX 'SINGLE' DIPPED HANDLES

The original handle for all Knipex Pliers and cutters. The smooth plastic gives the pliers' handle an excellent surface for the hand to grip yet allowing a degree of flexibility when working with the tool.

KNIPEX 'COMFORT GRIP' HANDLES

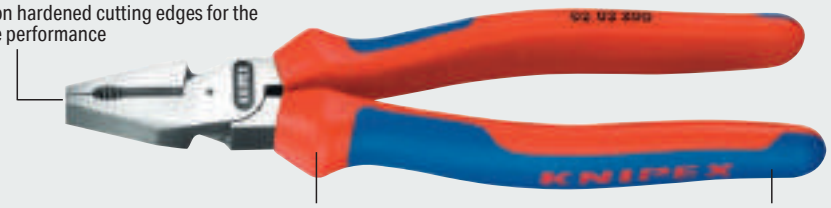

Some of our pliers and cutters have the improved 'Comfort Grip' handles.

The redesigned two component handles support and complement Knipex's other products with specialist handles - the Draper 8 Series, VDE and 'S' ranges.

Special shaping and distribution of materials are the result of extensive research into the gripping characteristics and flow of movement when working with pliers.

There are two types of material used in the handle; harder where there is less friction to allow movement in the hand and softer where force is applied and slipping in the hand is to be prevented.

SMOOTHLY GROUND HEAD
Induction hardened cutting edges for the ultimate performance

POSITIONING AND SUPPORTING ZONE
The shape of the upper part of the handle offers support, especially where forces take effect in a longitudinal direction

GRIPPING ZONE
Softer material with better grip where force is applied to prevent slipping

SPECIAL FEATURES OF TwinForce® PLIERS

- Easy cutting with little strain, cuts 50% easier than traditional diagonal cutters
- Reliably cuts all types of wire, including steel tape
- High degree of stability and zero-backlash due to precisely milled forged-in axles
- Low cutting impact, gentle on hands. The tension on muscles and tendons is relieved for comfortable cutting, repetitive cutting or extremely hard cutting jobs

EXTRA SPECIAL FEATURES

The option to reapply the tool prior to cutting. The Knipex TwinForce® cuts even 4mm thick wire without great effort when reapplied two or three times. Conventional high leverage diagonal cutters either cannot cut these diameters or only with very great effort.

Step 1

Insert the wires as close to the hinge as possible. In case of cutters with very high transmission, the width of the gap between the cutting edges close to the fulcrum may be less than the thickness of the wire. Wires may slip forward when the cutting starts.

Step 2

First make a notch in the wire using the Knipex TwinForce® until the required hand force increases considerably. Now open the pliers and slide the wire backwards towards the joint. Hold the cutting edge in the notches you have made in Step 1.

A SPECIAL RANGE OF PLIERS WITH ANTISTATIC HANDLES

Static electricity can cause damage to electronic circuits and components. The severity of the damage will depend on the sensitivity of the components. In the worst instance, the most sensitive components can be ruined. Static electricity and its effects, can be avoided if an antistatic material is used for the sleeves on the handles. The electrical resistance of the sleeves is between 105 and 109 Ohms and allows a controlled discharging of the tool as requested by the relevant standards.

Precision box joint for long life. Highly polished surfaces for rust protection - even better with thin oil cover. Captive frictionless double spring on some models. Black soft, plastic coated handles for delicate and accurate work in continuous production environment. Capacity specification of cutter clearly marked on handles to avoid damage which could be caused to cutting edges by misuse. The precision box joint on this range (except Item Nos. 1-3 this page) allows continuous use without degrading, making them ideal for the electronics assembly industry where a high level of intricate work is required. The low profile jaws allow precision access to circuit board components. PRECISION CIRCLIP PLIERS

This generation of circlip pliers (Item Nos. 1-5) combines the advantages of hot forged pliers with the longevity of cold-drawn highly condensed steel tips. Gives up to ten times longer service life.

Inserted tips of highly condensed spring steel offer optimum stability when loosening tightly fitting circlips.

Spring inside the joint: (only external circlip pliers)

The spring is protected inside the precision screw joint. It doesn't hinder work and can't get dirty or lost.

The slip style head allows use in confined areas.

PROFESSIONAL FACE MASKS

CE marked face masks reduce the amount of dust you breathe. FFP1, FFP2 & FFP3 have an APF (Assigned Protection Factor) indicating the protection level you get if the masks are worn correctly (reducing particles inhaled by factors of 4, 10 and 20 respectively). If, for example, you are exposed to high levels of grain dust or MDF sawdust or will be exposed to the use of aerosols, an FFP3 mask is advisable. Our FFP2 welding masks have an additional carbon filter, which protects against welding fumes and ozone – a by-product of MIG and TIG welding. Our FFP1 decorator's mask has a charcoal filter that reduces the effect of paint and varnish odours, which are often the cause of headaches or dizziness.

CE All masks provided for use at work must be CE marked to show that the product has been tested to a recognised standard.

NR Not reusable: if masks are marked NR, they should be used for a single shift only and be disposed of after use.

FFP1, FFP2, FFP3 are designed to filter out dust and particles. (The higher the number, the more protection given).
They must not be used where there is an oxygen-deficient atmosphere or harmful gases and and vapours.

FFP1 – APF 4: when worn correctly, it will reduce exposure by at least a factor of 4 (filtering efficiency 80%)

FFP2 – APF 10: when worn correctly, it will reduce exposure by at least a factor of 10 (filtering efficiency 94%)

FFP3 – APF 20: when worn correctly, it will reduce exposure by at least a factor of 20 (filtering efficiency 99%)

DID YOU KNOW?

Many people are exposed to loud noise at their workplace that could result in damage to their hearing. Noise regulations were imposed, protecting workers from the health risks caused by noise. The aim of the noise regulations is to ensure that workers' hearing is protected from excessive noise which, if unchecked, could cause them to lose their hearing and/or to suffer from tinnitus (permanent ringing in the ears). Compliance with noise regulations allows workers' hearing to be protected. For further information on the latest noise regulations, visit hse.gov.uk.

   5.2. the Buyer alters or repairs such goods without the written consent of the Seller;
   5.3. the defect arises as a result of fair wear and tear, wilful damage, negligence or abnormal storage or working conditions; or
   5.4. the goods differ from their description or specification as a result of changes made to ensure they comply with applicable statutory or regulatory requirements or continuous improvement.
